

VSS-1 System

Data Sheet

Conference Room Skype Links & Upgrades for iPhone Video, Recording & Live Streaming

A New Opportunity: for every conference room & enterprise - upgrade communications by adding iPhone, iPad, Android, PC/Laptop & Mac Skype video capabilities. **The Microsoft acquisition of Skype makes this communications link even more compelling . . .**

The Situation: In a typical conference room, with a videoconferencing system from Cisco TANDBERG, Polycom, Sony, & LifeSize using IP or ISDN for communications, there are one or more large screen monitors (LCDs/Plasmas/Projector), and a high quality PTZ camera, one or more mics, and speakers.

Since just this year, there are now lots of new mobile smart phone video users. . . and there are literally millions of Skype users with a webcam, a PC, Laptop, or Mac screen, mic and speakers . . . but how can any of these remote and mobile users communicate back to their conference room systems? The conference room needs our new VSS-1 System.

The Options: Upgrade your existing conference room & enterprise system with the VSS-1 system . . . or get a complete new system for your conference room including the VSS-1 System. We are experienced authorized systems integrators and resellers for [Cisco TANDBERG](#), [Polycom](#), [LifeSize](#), & [Sony](#).

The Benefits . . . of conference room video calls to iPhones, PCs, Laptops & Macs. . .

- More efficient communication to the many mobile & remote video users via their PCs, Laptops, Macs and iPhones & iPads.
- A group of people in your conference room can avoid crowding around a small PC, Laptop, Mac, iPhone or iPad for a video call.
- The conference room cameras can move via remote control to a wide angle view, or to zoom in to focus on a particular speaker or object.
- The conference room table-top mics allow remote sites to more clearly hear people around the conference room.
- The remote sites will appear on the large screen, so your group in the conference room can easily see them.
- Room speakers allow you to adjust the volume so the remote site can be heard clearly.
- Point to Point, Multi-Site, and Skype Group Video Conferencing can each be supported.
